HOW TO LIST YOUR PRODUCTS IN SYMYX® ACD OR SYMYX® SCD

WHY PARTICIPATE —

With its extensive reach to synthetic chemists, Symyx Technologies, Inc. can market your compounds to potential purchasers for FREE.

The Symyx Available Chemicals Directory (Symyx ACD) is the industry-leading structure-searchable collection of consolidated global chemical supplier catalogs of commercially available chemicals. Symyx ACD is trusted and used by more scientists than any other supplier database worldwide and has been the *de facto* standard in pharmaceutical, biotechnology, chemical and agrochemical companies worldwide for over 20 years.

The Symyx Screening Compounds Directory (Symyx SCD) complements Symyx ACD, with over four million screening compounds. Since its initial release in 1997, Symyx SCD has more than tripled in size to make it the most comprehensive high-throughput screening directory available today.

If you are not sure which database is appropriate for your product listing, please contact acdsuppliers@symyx.com.

REQUIREMENTS —

We prefer to receive supplier product data electronically, although we also accept hard copy catalogs or catalogs in PDF format. Please note that processing hard copy catalogs and PDF files takes longer, and could delay the addition of your data to our database.

Preferred electronic formats:

- Symyx® ISIS/Base local database
- Symyx SDfile
- Symyx RDfile
- Microsoft® Excel® spreadsheet
- Microsoft® Access® database
- Oracle® tables (as Oracle export file)
- Delimited ASCII text files

When submitting electronic data, please send a complete representation of your product data (i.e. the same data you would provide in a printed catalog).

The minimum information we require for every product is a structure (in MDL molecule file format) or a chemical name. We do ask however that you send as much information as possible for each of your products. For example:

- Product name
- Catalog number (SKU if available)
- Structure
- Synonyms
- CAS Registry Number
- Package quantity / Package units / Price
- Availability
- Purity
- Specification / Grade
- Physical properties (including units), such as: Melting Point, Boiling Point, Density, Refractive Index, Optical Rotation, Isotopic Enrichment, LogP
- Other comments associated with the compound

This data should be stored in separate fields, in one of the preferred electronic formats.

Please provide your complete company contact information, as you would like it to appear in the database. Include global distributors if you have them, along with their address, phone/fax, email address and URL.

We will also need your direct contact information for our future communications, so that we can keep your product listing up-to-date.

Please submit your electronic product file to acdsuppliers@symyx.com.

TIPS FOR SUBMITTING SUPPLIER DATA:

- 1) We prefer that you provide full product updates for each submission to Symyx ACD. However, if you do provide supplemental product updates, please clearly indicate which products have been dropped and/or revised.
- 2) If your products are identified by catalog numbers, please include them. If you have package-specific catalog numbers, these are preferred. If your catalog numbers are likely to be re-assigned or change from release to release, please let us know.
- 3) All data fields should contain just one type of data, e.g., don't include purity data in the product name field.
- 4) Please make sure that your quantity, unit and price data are in a consistent format. We prefer that this data be in separate fields rather than combined in one field.
- 5) Please bear in mind that clean and accurate data is critical to ensure that it appears in the latest release.

If you need more specific information about submitting your data, please contact us at acdsuppliers@symyx.com, or visit our [Chemical Catalog Terms and Conditions](#).

Symyx Technologies, Inc. (Symyx) prioritizes the processing of supplier catalogs based on customer demand and, therefore, makes no guarantee to include supplier data in any specific release of Symyx Available Chemicals Directory (Symyx ACD). If a supplier submits complete, accurate data on time and in the requested format, and if Symyx accepts all or a portion of the submittal, then Symyx will make a good faith effort to update the supplier listing in Symyx ACD in a timely manner. Suppliers are solely responsible for the accuracy of the data they submit, and Symyx is not liable for any omission or inaccuracy in supplier records incorporated in Symyx ACD.
